DETAILED ACTION

Drawings

1. Figure 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.121(d)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Objections

2. Claims 1 and 4 are objected to under 37 CFR 1.75(e) as lacking the phrase "wherein the improvement comprises", as required in the Jepson claim format. (see MPEP 2129)

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-6 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not

described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The specification discloses that an image-quality adjustment filter 13 applies the filter processing to an image signal output from the delay circuit 11. And a motion-image signal sent from the delay circuit 11 is taken out from a delay circuit 16 corresponding to the image interpolation filter 10 and the filter 13, and the image signal is selected by a selector 17 and is output from the output terminal 15 through the selector 14. However, in claims 1 and 4, the claimed "applying image quality adjustment to the second set of image stored in the first and second image memories", is not enabling because there is no enabling disclosure described in the specification to show the image-quality adjustment filter (13) "applying image quality adjustment to the second set of images stored in the first and second image memories". Therefore, one skilled in the art would not be able to make and use the invention as claimed without undue experimentation.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Achiha et al. U.S. Pat. No. 4,739,390 discloses a television signal processing circuit which interpolates the scanning lines of the signal by using a video memory such as a frame memory or a field memory.
